Discover the Power of a HEATED COMPOSITE DISPENSER

For optimum temperature, all the benefits* of heated delivery at the tooth surface, **Compex HD** delivers the perfect flow for all restorative procedures including injection molding and porcelain cementation. **Compex HD** heats all compules to 155°F (68°C) in 40 seconds or less. Up to 100 compules can be dispensed without recharging.

This all-in-one, lightweight, heated dispenser saves space and easily moves from room to room. Fast compule insertion and ejection saves time. Infection control via included autoclavable silicone sleeves and barrier bags.

THE EASE, CONVENIENCE, AND COMFORT OF COMPEX HD MAKE IT A MUST-HAVE FOR YOUR PRACTICE.

COMPEX HD™

The Compex HD™ Uses the Latest PTC Technology to Rapidly Warm Heavily Filled Compules

AdDent, Inc., the first to market composite warmers, has re-envisioned composite delivery with the Compex HD™ Heated Dispenser. This innovative device uses PTC technology to rapidly warm even heavily filled compules.

- Able to quickly heat composite material to 155°F
- Warming composite significantly lowers the viscosity of the material, resulting in better adaptation, reduced voids, gaps, and microleakage
- Reduces cure time and increases the depth of cure
- Increases micro-hardess and reduces shrinkage stress
- Materials remain highly sculptable, non-sticky, and easily shaped
- Improves shade stability

FEATURES

- Light weight handheld rechargeable device.
- Heats a broad range of compules.
- Heats compules to 155°F (68°C) in 40 seconds or less.
- Heats up to 100 compules without recharging.
- Easy to load and unload with patented ejector mechanism.
- Silicone sleeve and barrier bag.
- Short recharge time.

BENEFITS

- Comfortable all in one heater and dispenser – saves space, easily moved room to room.
- Heats most composite compules currently on the market.
- Delivers all composite without temperature loss.
- Charge no more than once per week under normal use.
- Fast compule insertion and removal saves time.
- Minimizes cross contamination by dentist or assistant.
- Full charge time is only 4 ½ hours.

COMPEX HD™ WILL ENHANCE PLACEMENT FOR ANY PROTOCOL

The Compex HD™ is extremely versatile and fits most brands of composite compules. This device enhances posterior bulk fills and traditional incremental layering techniques. Delivering all the benefits of heated composite, directly to the restoration by maintaining the optimal temperature during the entire protocol.

STUDIES PROVE THE BENEFITS OF HEATING COMPOSITE

The heating technology of Compex HD™ lowers the viscosity of all composite materials, allowing it to better flow and adapt to preparation walls. As a result, voids and micro-leakage are reduced, which then reduces the risk of secondary caries and restorative failures. Heated composite material also improves the physical and handling properties while improving color stability.
